

- The figure is a 4x4 grid of sub-images. The first two rows show traditional design methods: the first row includes a block diagram of a power distribution network, a table of component values, and a schematic diagram; the second row includes a schematic diagram, a table of component values, and a schematic diagram. The last two rows show the proposed design method: the third row includes a schematic diagram, a table of component values, and a schematic diagram; the fourth row includes a schematic diagram, a table of component values, and a schematic diagram. The proposed method shows a more complex and detailed design compared to the traditional methods.
